EPICS Overview

Friday, 9 May 2014

Third session: Existing set of EPICS client applications and tools: The last day will cover EPICS client applications. We will take a look at Control System Studio (CSS) and other tools that integrate with it like BEAST, BEAUTY and BOY. This will give us the insight how EPICS clients display and archive data and how alarms raised in the control system can be managed by the operators. Finally we will look at the options how to develop custom client applications that integrate into the EPICS environment. - Tänkartanken (09:00 - 12:00)
