

# Geant4/PHITS Benchmarking

Douglas D. Di Julio

ESS-J-PARC Workshop

19<sup>th</sup> Jan. 2018

- Geant4: Monte-Carlo code used at ESS for shielding, backgrounds and detector simulation
- PHITS: Monte-Carlo code used for neutron beamline and shield design of neutron scattering instruments at J-PARC
- PHITS contains many useful features relevant for neutron scattering instrument design
- These features are not by default included in the Geant4 simulation package

# Benchmark Tests

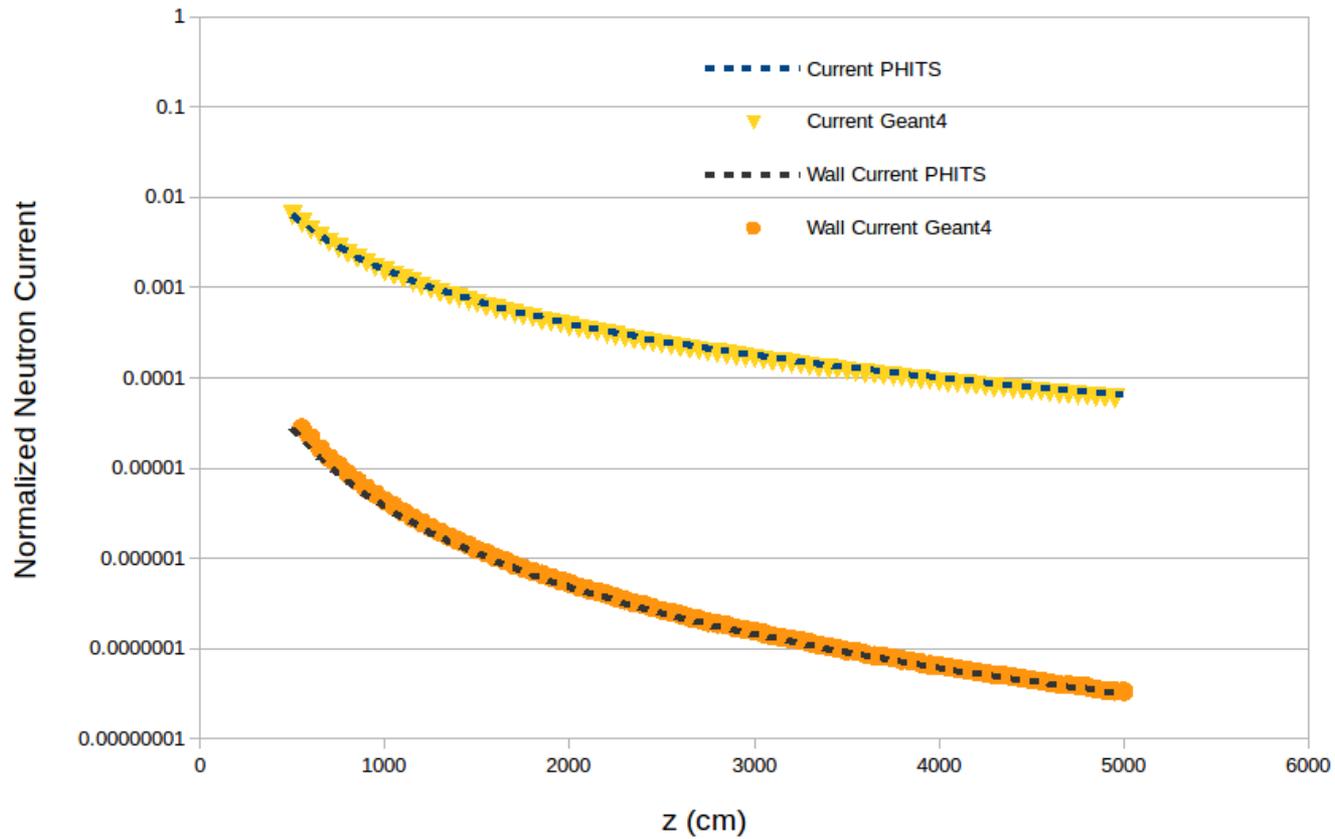

- Three benchmark tests shown here:
  - Benchmark 1: Duct-source option
  - Benchmark 2: Duct-source option + supermirror physics
  - Benchmark 3: Duct-source option + supermirror physics + T0 chopper
- Geant4 simulations carried out by Douglas Di Julio
- PHITS simulations carried out by K. Takeda and K. Niita
- PHITS content in these slides is taken from, “Report on Beam Line Design for Neutron Scattering Facility of ESS”, K. Takeda and K. Niita

# Duct-source option - Long beamline simulation

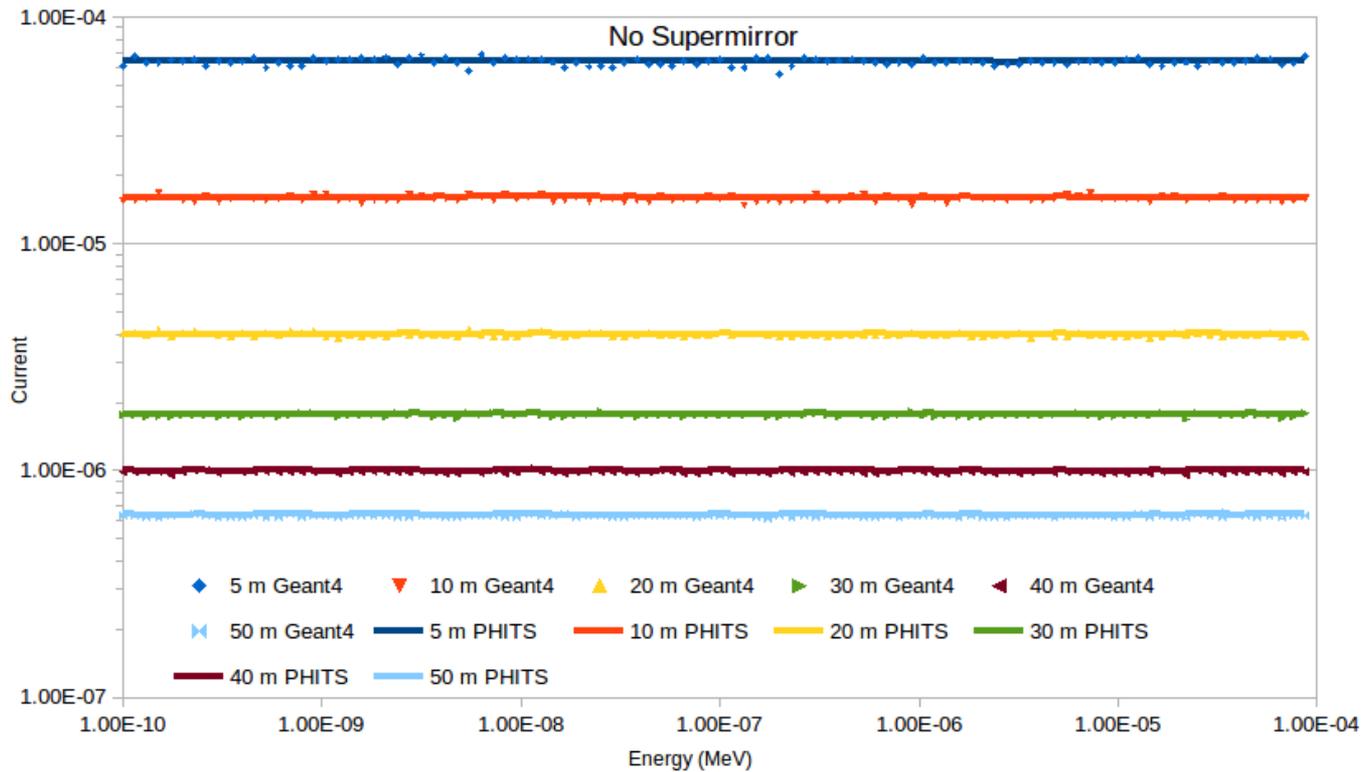

- Current through a beamline decreases as  $1/r^2$  as distance from source
- The current crossing the wall of the beamline at 150 m is roughly six orders of magnitude smaller than at 1 m
- To reduce the variance, we introduced a duct source option in Geant4
- The idea is to equalize the wall current at any point in a beamline by changing the weights of the neutrons

# Duct source variance reduction

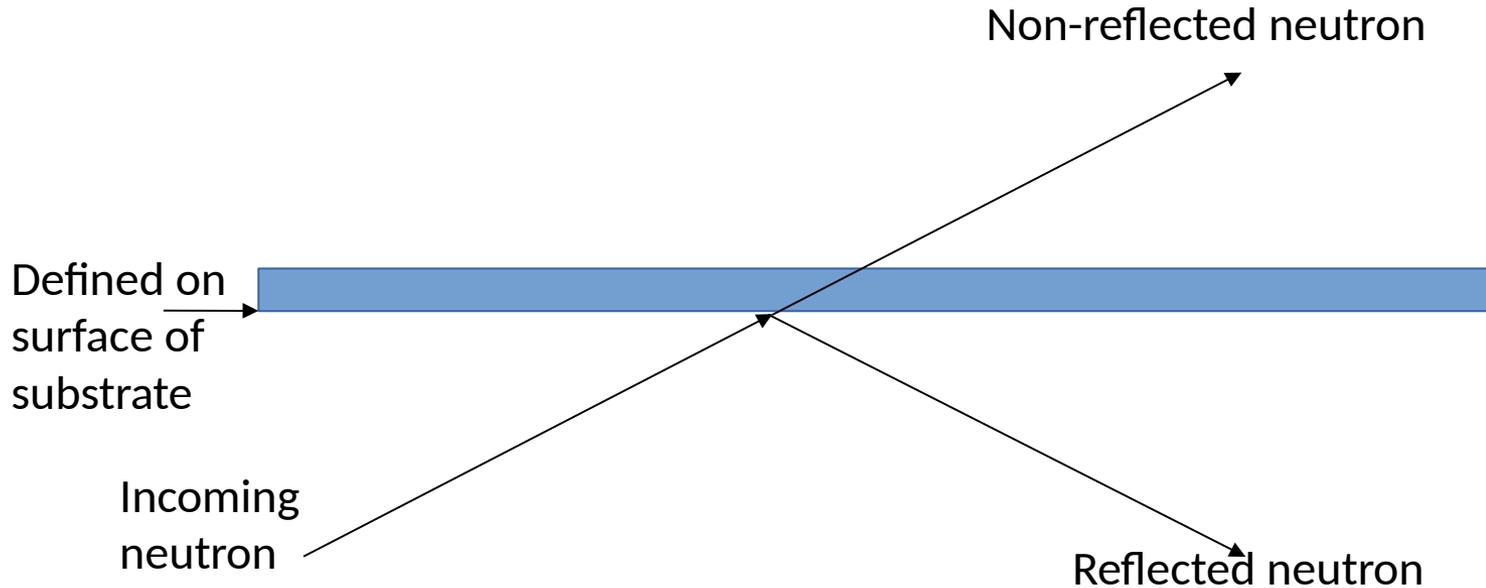

Benchmarked against PHITS

# Duct source with no supermirror

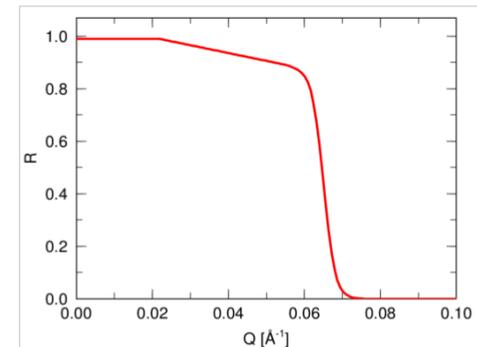

No guide

# Supermirror physics

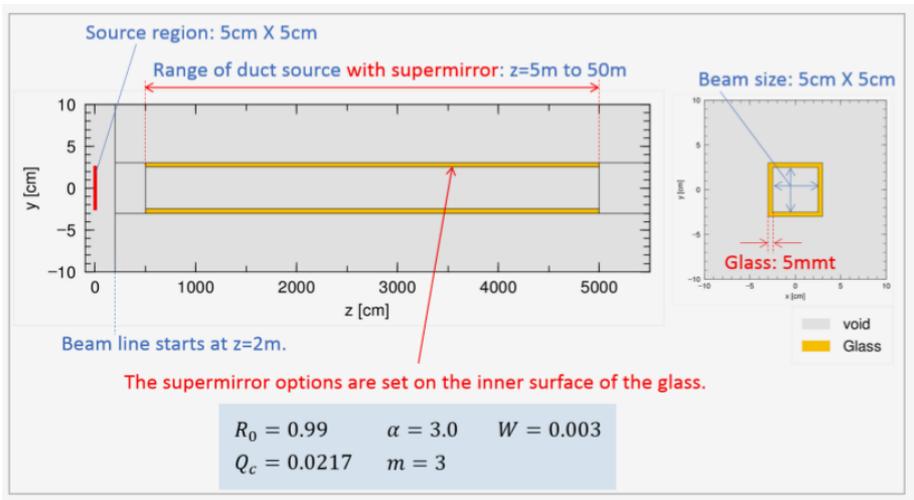

Reflectivity described by empirical formula

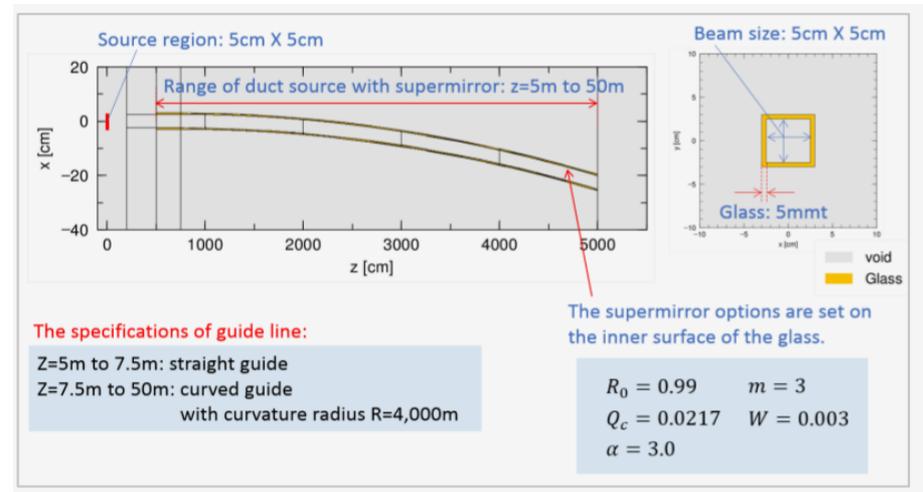

$$R = \begin{cases} R_0 & \text{if } Q \leq Q_c \\ \frac{1}{2}R_0 \left(1 - \tanh\left[\frac{Q - mQ_c}{W}\right]\right) (1 - \alpha(Q - Q_c)) & \text{if } Q > Q_c \end{cases}$$

Implemented in Geant4 with support of Xiao Xiao Cai from ESS detector group

# Duct-source + supermirror physics

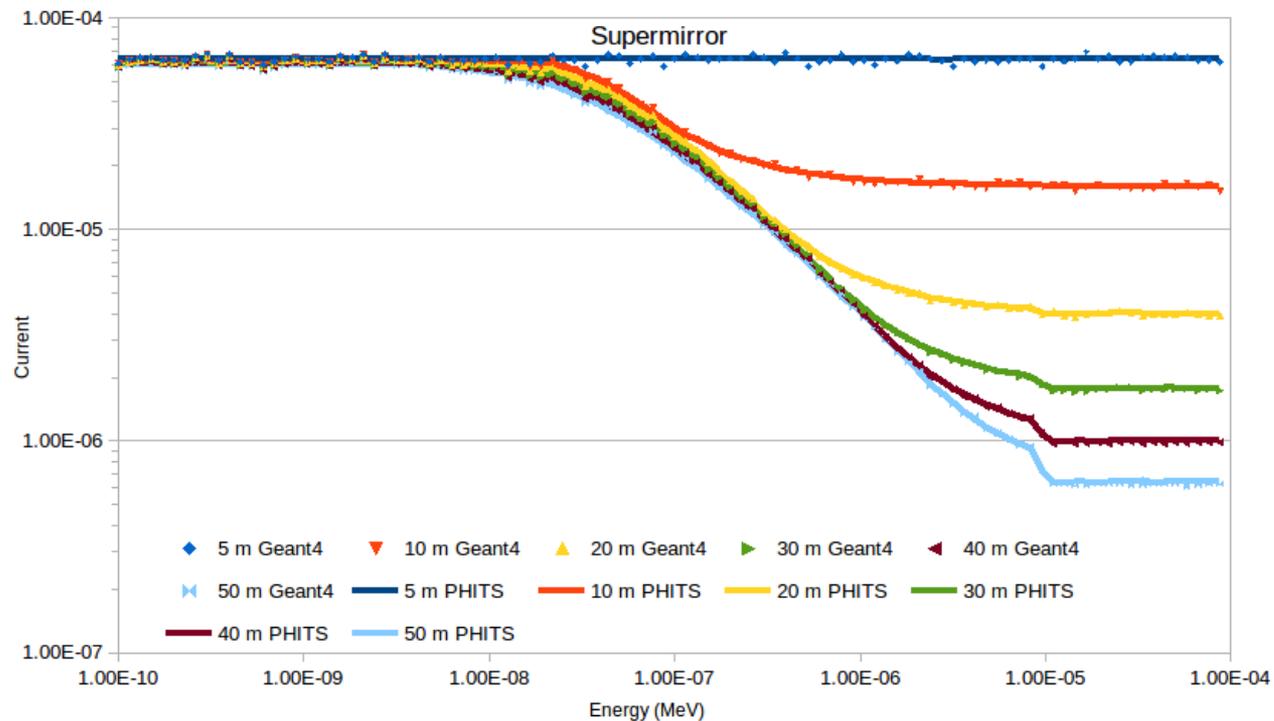

Straight guide

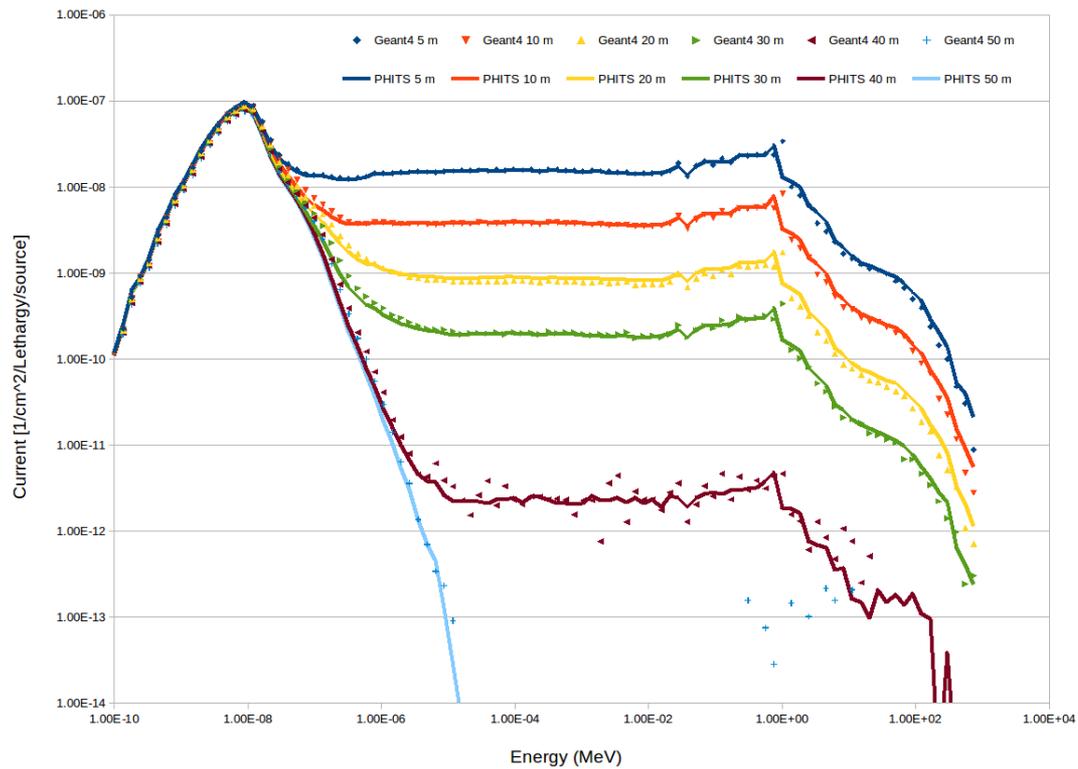

Curved guide

# Supermirror physics – with supermirror + duct source

Straight guide

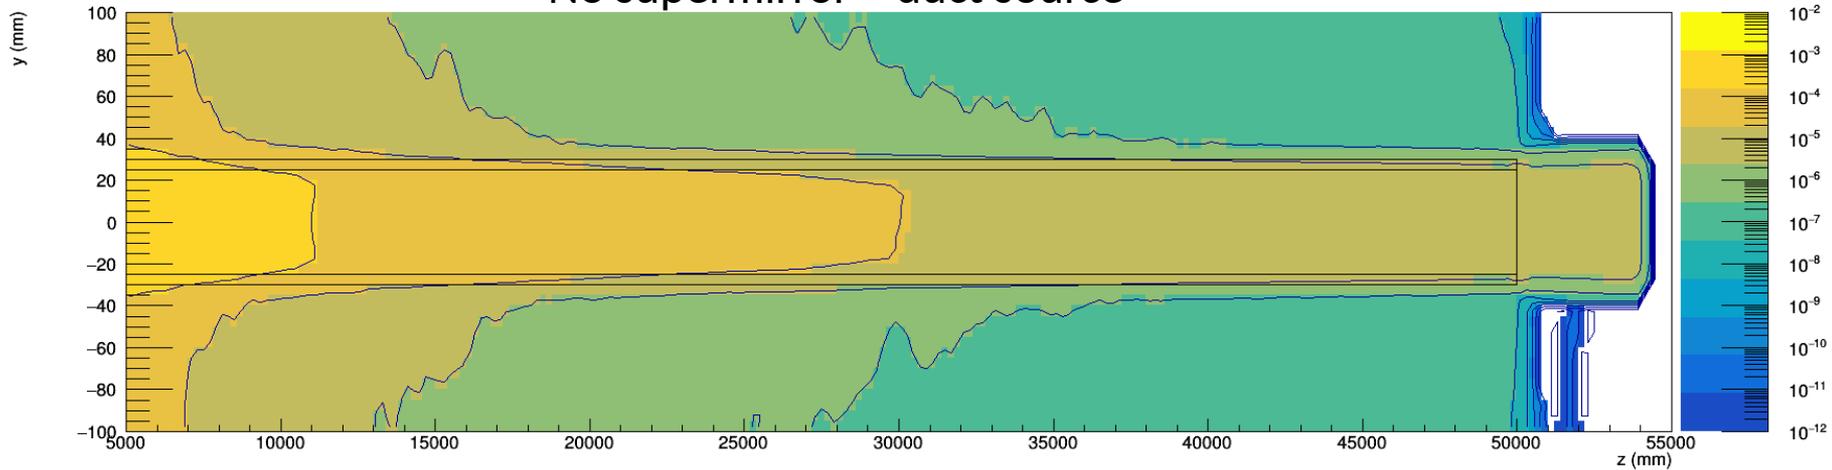

# Supermirror physics – with supermirror + duct source

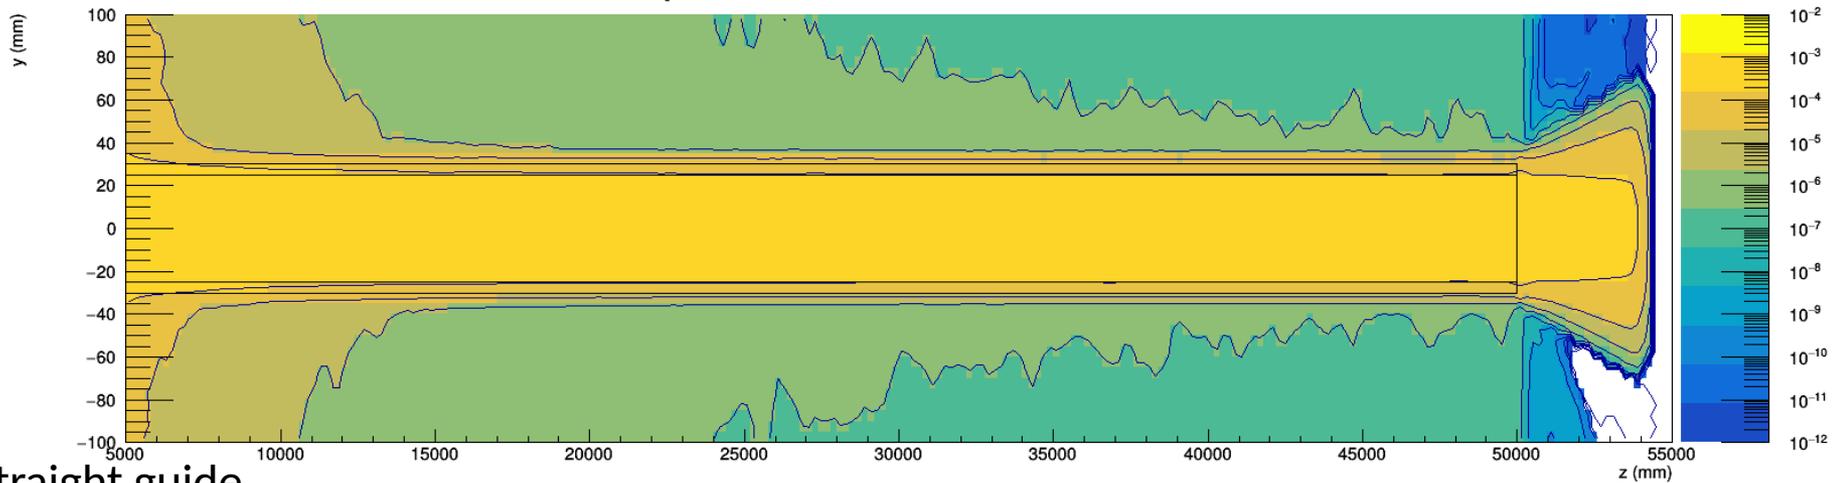

Curved guide

# Supermirror physics – neutrons inside and outside the guide

## No supermirror + duct source

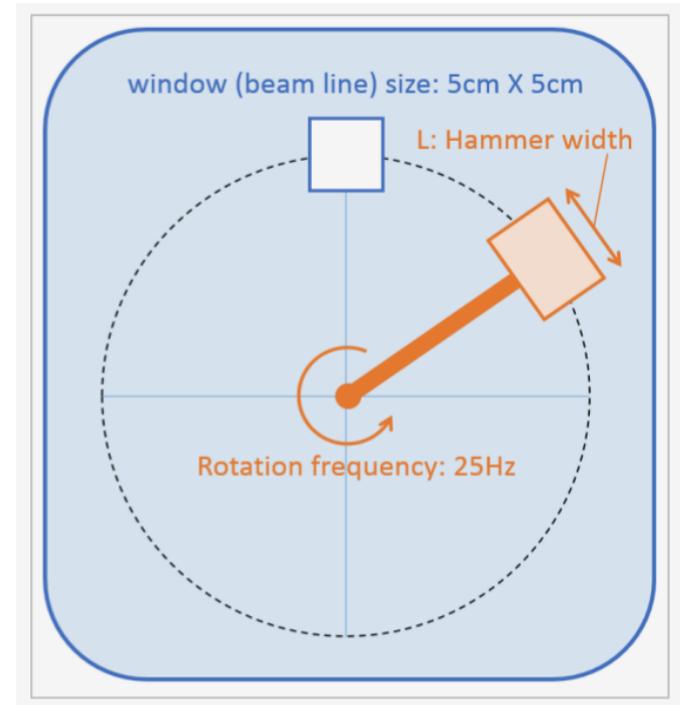

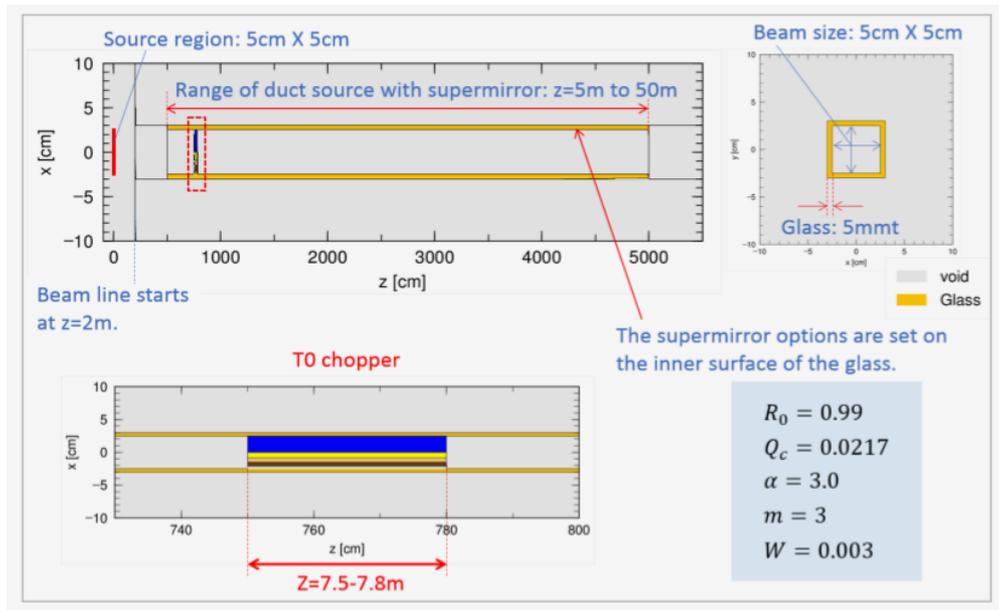

## Supermirror + duct source

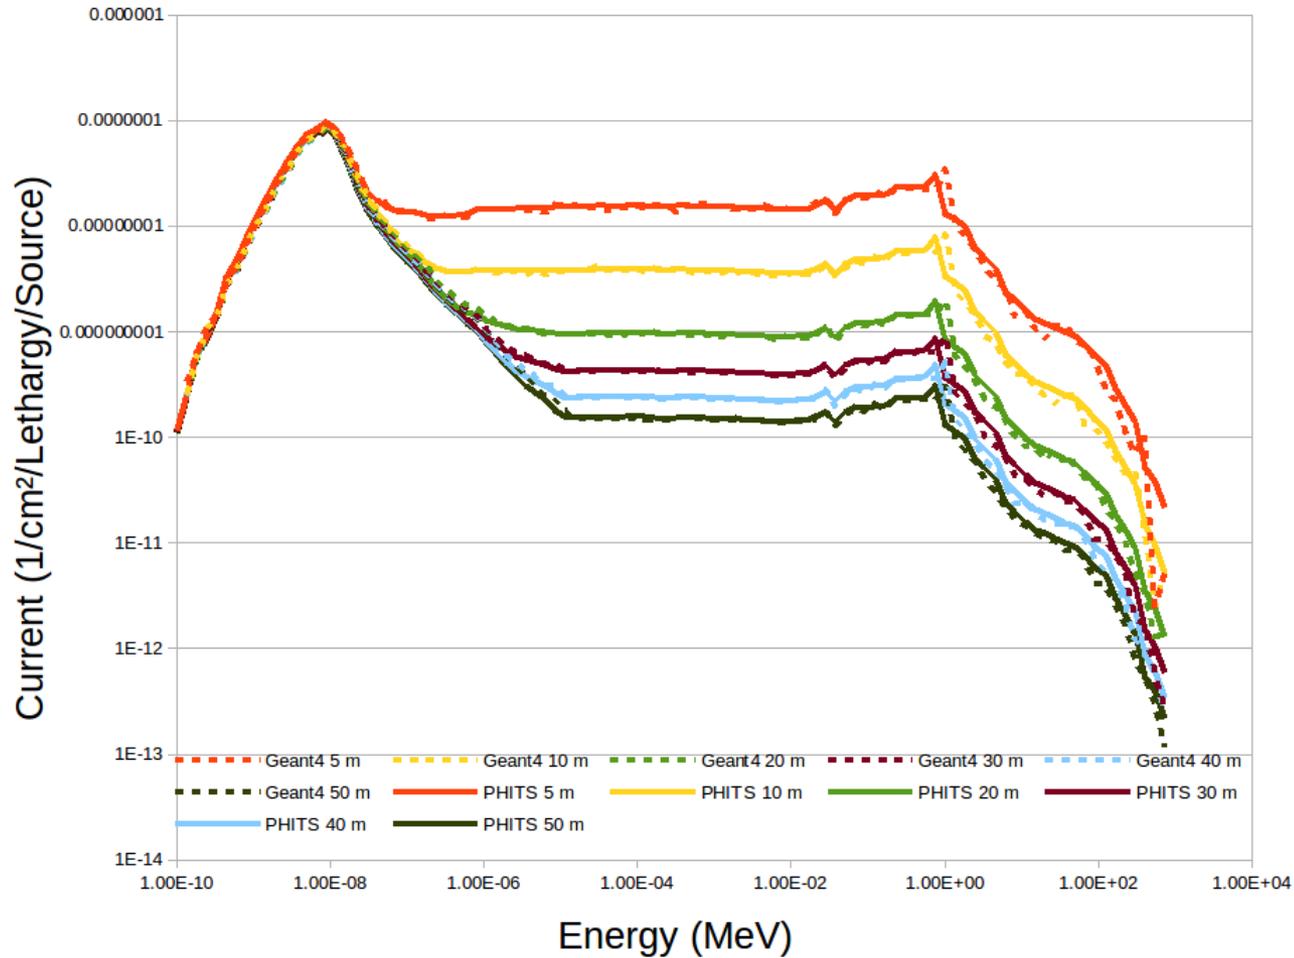

Straight guide

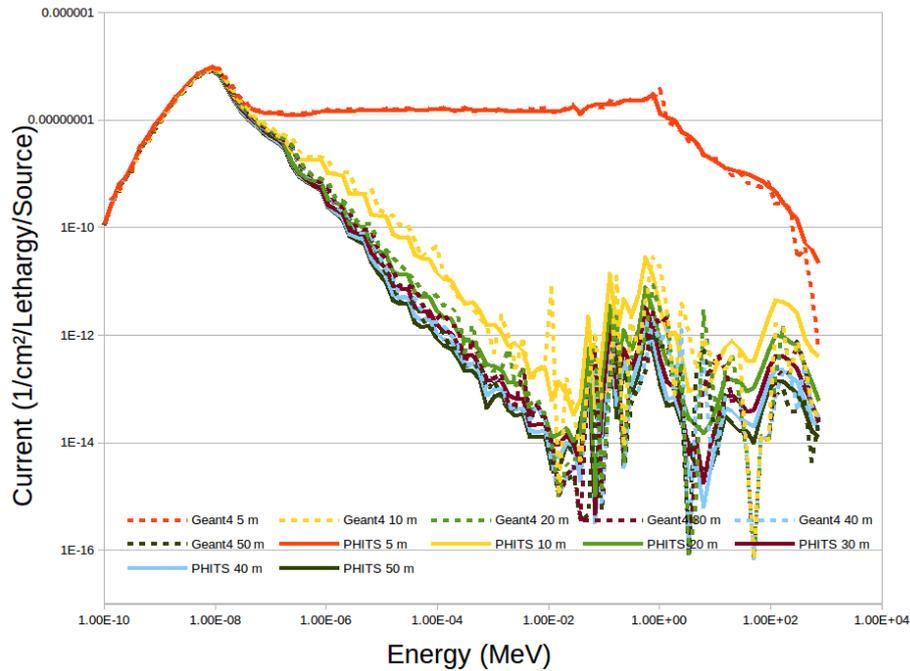

# Duct-source + Supermirror with T0 chopper

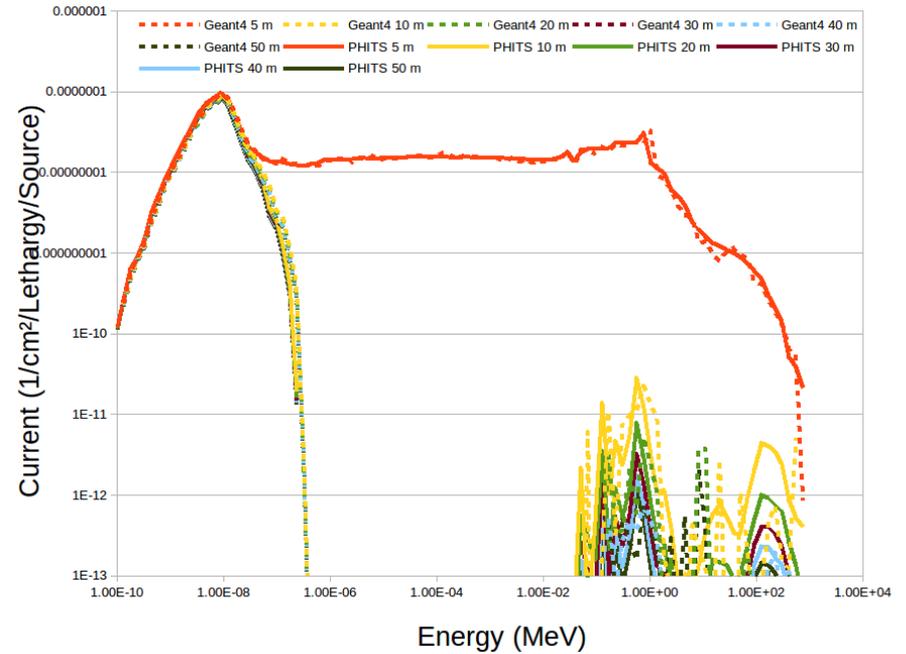

# Duct-source + Supermirror with no T0 chopper

# Duct-source + Supermirror with T0 chopper

5 cm width

10 cm width

- PHITS is being used for neutron beamline and radioactivity calculations at ESS (see Phil's talk)
- One step closer to full signal/noise calculation of a neutron scattering instrument using Geant4 (together with tools from the ESS detector group)
